**COLLECTION NUMBER:** B1997.003

**OVERVIEW OF THE COLLECTION**

Dates: circa 1937

Extent: 2 boxes; 0.8 linear feet

Language and Scripts: The collection is in English.

Name of creator(s): S. McVey

**Administrative/Biographical History:**

Platinum was first discovered in the Goodnews Bay area in 1926. In 1934, the Northland Development Company began large-scale mining operations there. Ownership was transferred to the Goodnews Bay Mining Company the following year. In 1937, a Yuba diesel-electric dredge began operations.

The original film canisters bore the name "S. McVey." Nothing was known about this individual at the time of processing. He may have been a resident of Montana before and after his time in Alaska.

**Scope and Content Description:**

The collection consists of 271 black-and-white 35mm nitrate negatives and some modern contact prints. Most of the images document mining activities in the Goodnews Bay area, including dredge construction. There are several images of Alaska Air Express Fairchild Pilgrim 100-B airplane N709Y. A handful of images depict construction activities outside of Alaska. For more information, see Detailed Description of Collection.

Arrangement: Arranged by format.
